SUMMARY

Full-stack software engineer with **4 years** on a multi-tenant B2B SaaS: **PHP/Laravel**, **Python/FastAPI**, **Vue/TypeScript**, **MySQL** and **AWS**. I build **REST APIs**, **event-driven** flows and Vue 3 frontends, owning features **end to end** from HLD/LLD to release and production support. On the AI team since Jul 2026, building **LLM-powered** features in Python.

WORK EXPERIENCE

Senior Associate Software Engineer Jul 2024 – Oct 2026
Recruit CRM, Remote, India

- Led the **Python (FastAPI)** backend of an **LLM-powered** resume-editing feature across 9 repositories: wrote the analysis and HLD, then built edit and save **REST APIs** with HMAC-signed sessions, **Redis** edit caps, an **LLM-as-judge** check, fallback to **AWS Bedrock** and per-edit credit billing; **284 pytest tests**.
- Re-architected record sequencing for queues of **100K+ records**: **PHP/MySQL** position-lookup and paged-search APIs using **SQL window functions**, 100-row chunked lazy loading in **Vue 3**, and fixes for MySQL's 65,535-placeholder limit.
- Led **entity-type (record-link) custom fields** for Candidates and Jobs and owned the HLD/LLD: **zero schema change** (slugs in existing custom-field columns), one batched lookup per list page into Pinia stores, an **access-controlled** PHP batch lookup API, Vue 3 to Vue 2 sync via single-spa events, feature-flagged and kept off public forms.
- Designed the extension of **nested (conditional) custom fields** to Candidates, Jobs and public apply forms: reused the tree builder behind two slug-scoped public PHP endpoints, fetched in parallel only for flag-enabled accounts, and built a **Next.js** form engine where root fields render their subtree and the rest fall back to the unchanged flat form.
- Added seven **event-driven** notification types on an existing **AWS SQS/MongoDB** pipeline; finished AI Sourcing alerts.
- Fixed **multi-tenant** security gaps: account-scoped SQL, an IDOR, **RBAC** checks on 7 endpoints, public-page allow-lists.
- Built **Vue 3** + **TypeScript** widgets (AG Grid, Pinia, **Vitest**) and cross-app event bridges in a **Vue 2 to Vue 3 migration**.
- Investigated **247 bug tickets** with root-cause analysis (Sentry, logs, production traces); reviewed **370+ PRs**; contributed to the team's AI-driven development workspace on **Claude Code**.

Associate Software Engineer Jul 2023 – Jun 2024
Recruit CRM, Remote, India

- Co-owned **webhook** enhancements on an existing Kafka-based pipeline: wrote the analysis, HLD and LLD for ten events, and built the candidate-unassigned event across the PHP backend, **public REST API** and **Zapier**.
- Built an opt-in override mode for CSV/XLS candidate imports, guarded so blank or zero cells never overwrite data.
- Built most of the **Vue 2** filter-search and shared saved-search UI for a search revamp on the candidate list page.
- Built per-job application-form questions: Vue 2 drag-reorder and visible/required toggles with PHP persistence.

Trainee Software Engineer Oct 2022 – Jun 2023
Recruit CRM, Remote, India

- Shipped candidate-module features in **Vue 2** and **PHP (Laravel)**, incl. searchable user pickers and a bulk-delete API.

SKILLS

Languages: PHP 8, Python, TypeScript, JavaScript, SQL, HTML, CSS
Back-end: PHP (Laravel/Lumen), Python (FastAPI), REST APIs (OpenAPI), Event-driven services (AWS SQS), Webhooks
Front-end: Vue.js 3 and 2, Pinia, AG Grid, Next.js and React (working knowledge)
AI / LLM: LLM APIs (LiteLLM, AWS Bedrock), LLM-as-judge, Model fallback, AI-assisted development (Claude Code)
Data & Cloud: MySQL (query optimization, window functions, views), MongoDB, Redis, AWS (SQS, S3, Bedrock)
Practices: System design (HLD/LLD), Code review, Testing (pytest, PHPUnit, Vitest), Git, Jenkins CI, Sentry

EDUCATION

Bachelor of Technology (B.Tech), Computer Science Jul 2019 – May 2023
Shivajirao Kadam Institute of Technology and Management, Indore, Madhya Pradesh
